

## CLAIM AMENDMENTS

1. (currently amended) A transgenic mouse whose genome comprises a transgene comprising mouse SM22 $\alpha$  promoter operably linked to a cDNA encoding a ~~mouse calreticulin (CRT) peptide, said peptide having at least 80% homology to~~ as set forth in SEQ ID No. 23,

wherein expression of calreticulin from the mouse SM22 $\alpha$  promoter in the vascular smooth muscle cells of the transgenic mouse results in hemangioma formation.

2. cancelled.

3. (currently amended) A transgene comprising mouse SM22 $\alpha$  promoter operably linked to a cDNA encoding a ~~mouse calreticulin peptide, said peptide having at least 80% homology to~~ as set forth in SEQ ID No. 23.

4. (currently amended) A method for producing a transgenic mouse that exhibits hemangioma comprising:

introducing into a fertilized mouse egg a transgene comprising mouse SM22 $\alpha$  promoter operably linked to a cDNA encoding a mouse calreticulin (CRT) peptide, said peptide having at least 80% homology to SEQ ID No. 23;

transplanting the injected egg in a foster parent female mouse; and

selecting a mouse derived from an injected egg whose genome comprises mouse SM22 $\alpha$  promoter operably linked to a cDNA encoding a ~~mouse calreticulin peptide, said peptide having at least 80% homology to~~ as set forth in SEQ ID No. 23,

wherein expression of calreticulin from the mouse SM22 $\alpha$  promoter in the vascular smooth muscle cells of the transgenic mouse results in hemangioma formation.

5. cancelled.

6. (withdrawn) A method for screening compounds that inhibit vascular tumor formation in a transgenic mouse comprising

providing a transgenic mouse whose genome comprises a transgene comprising a transcriptional control region operably linked to a cDNA encoding calreticulin (CRT);

allowing CRT to be expressed in said transgenic mouse  
administering a compound to said mouse; and  
determining whether said compound reduces hemangioma formation.

7. (withdrawn) A compound isolated according to the method of claim 6.

8. (withdrawn) A method of testing the therapeutic activity of a  
pharmacological agent on Kaposiform hemangioendothelioma comprising  
administering an effective amount of said pharmacological agent to the mouse of  
claim 1 and evaluating said agent's effect on hemangioma formation of said mouse.

9. (withdrawn) A compound isolated according to the method of claim 8.

10. (withdrawn) A method of inhibiting hemangioma formation comprising  
administering an effective amount of a matrix metalloproteinase inhibitor to a patient  
in need of such treatment.

11. (withdrawn) A method of inhibiting hemangioma comprising  
administering to an individual in need of such treatment an effective amount of virally-  
administered small interference RNA (siRNA) corresponding to a portion of CRT  
mRNA, wherein expression of the siRNA decreases the level of CRT.

12. cancelled.

13. cancelled.

14. (previously presented) The transgenic mouse according to claim 1 wherein  
the mouse SM22 $\alpha$  promoter is a DNA sequence corresponding to nucleotides 1 to  
1343 of SEQ ID No. 1.

15. cancelled.

16. cancelled.

17. (previously presented) The method according to claim 4 wherein the  
mouse SM22 $\alpha$  promoter is nucleotides 1 to 1343 of SEQ ID No. 1.

18. (previously presented) The transgene according to claim 3 wherein the  
transgene is nucleotides 1 to 2655 of SEQ ID No. 1.

19. (previously presented) The transgene according to claim 3 wherein the  
transgene is nucleotides 1 to 2691 of SEQ ID No. 12.
